ADVANCE MENTORING IMPLEMENTATION TEAM SKILLS AND MASTERS IN SUPPLY CHAIN LOGISITICS MANAGEMENT

- Working with the Integrated Supply Chain executive leadership team and cross company technology executives, develop and refine the ISCM technology strategy and roadmap. Identifying and prioritizing technology investments and delivering them in the most efficient manner
- In partnership with cross-segment business technology leadership develop a management and support strategy for the existing and new portfolio of systems and projects, which enable the integrated supply chain strategy
- Rationalize the many bespoke systems supporting the multiple supply chain and compliance needs of our business segments today, focused on deploying global, transactional and workflow systems, supported by data and analytic capabilities which enable transparency and appropriate risk based business decision making processes
- Deliver technology solutions, meeting commitments with speed and quality
- Promote cross-company technology strategic collaboration and solution sharing among the broader TWDC technology community
- Anticipate and manage the risks associate with day-to-day technology operations. Ensure ongoing operational stability of the current applications and systems
- Actively work to build and mentor a highly motivated, enthusiastic, and skilled team; communicating career paths, training and development
- Ability to establish global executive level relationships across the various business and technology executives within TWDC
- Establish and manage effective working relationships in a matrix environment with other departments, groups and staff with whom work must be coordinated or interfaced
- A person that can decide and act without having the total picture and is comfortable handling risk and uncertainty

- A “working IT executive” who gets into the details and is experienced in managing multiple medium to large scale initiatives and cross functional teams

- Ability to identify and marshal resources (people, funding, support) to get projects initiated and completed
- Ideal candidate will have an in depth knowledge of key supply chain/logistics processes/systems and current best practices
- Demonstrated track record of creating a vision, gaining buy-in to the vision, and effectively implementing systems
- A strong business orientation combined with strong IT technical skills
- Previous experience in managing both direct and indirect teams

## PROJECTS

- Work with all Suppliers, using all communication tools (phone, email, meetings), and with frequency as required to support program (i.e. daily for critical items), to monitor and track status of Purchase Orders. Exert all efforts to ensure that scheduled delivery dates are met or moved up as needed
- Conduct and lead frequent shortage meetings with cross-functional team to review shortages, and expected deliveries, advise on re-commitments, and flag and obtain approval for back-up plans as required. Initiate and execute back-up plans when directed
- Perform functions for other members of the Procurement Team as required, to support Laser Program directly or indirectly
- Complete special assignments and general administrative duties as requested by Manager
